

5. onSubmit Client Script

Step 1 – Create the Client Script

Go to **System Definition → Client Scripts** and click **New**.

Enter the following details:

** *Name:** Prevent save if Assigned To missing

** *Table:** Incident

** *Type:** onSubmit

** *Active:** True

Step 2 – Configure the Validation

The purpose of this Client Script is to validate the **Assigned To** field when the Incident is submitted.

The validation should apply only when:

** *Impact = High**

** *Assigned To = Empty**

Step 3 – Add the onSubmit Function

Enter the following script:

```
javascript  
function onSubmit() {  
  
    if (g_form.getValue('impact') == '1' &&  
        g_form.getValue('assigned_to') == '') {
```

This checks whether the Impact is High and the Assigned To field is empty.

Step 4 – Display the Error Message

Add the following code:

```
javascript  
g_form.showErrorBox(  
    'assigned_to',  
    'Assigned To is mandatory for High impact incidents.'  
);
```

This displays an error message on the *Assigned To* field when the validation fails.

Step 5 – Prevent the Record from Saving

Add:

```
javascript  
return false;
```

This stops the Incident record from being submitted when Impact is High and Assigned To is empty.

Step 6 – Allow the Record to Save

If the validation condition is not met, the script should allow the record to save.

Use:

```
javascript  
return true;
```

For example, if Impact is Medium or Low, the Incident can be submitted normally.

Step 7 – Test the Client Script

Test the script using the following scenario:

1. Open an Incident.
2. Set *Impact = High*.
3. Leave *Assigned To* empty.
4. Click *Submit*.
5. Verify that the error message appears.
6. Verify that the record is not saved.
7. Select a user in *Assigned To* and click *Submit* again.

Expected Result

When *Impact = High* and *Assigned To is empty*, the Incident cannot be saved.

The following error message should be displayed:

"Assigned To is mandatory for High impact incidents."

After selecting an *Assigned To* user, the Incident should save successfully.
