

PHASE 3 – UI POLICY ACTION: URGENCY

1. Objective

The objective of this configuration is to control the **Urgency** field based on the Incident **Impact** value.

When the Incident Impact is set to **1 – High**, the Urgency field should become **read-only**. This prevents users from modifying the Urgency value while the Incident is classified as high impact.

2. UI Policy Action Configuration

Configuration	Value
UI Policy	High Impact control
Field name	Urgency
Read only	True
Visable	Leave unchanged

3. Configuration Logic

The **High Impact Control** UI Policy is already configured with the condition:

Impact is 1 – High

A UI Policy Action is added for the **Urgency** field.

The following configuration is applied:

Read-only = True

The Visibility setting is left unchanged so that the Urgency field remains visible on the Incident form.

4. Expected Result

Scenario 1 – Impact is High

When:

Impact = 1 – High

Then:

Urgency = Read-only

The user can view the Urgency value but cannot modify it.

Scenario 2 – Impact Condition Changes

When the Impact condition is no longer satisfied, the field behavior can be reversed according to the UI Policy configuration.

If the UI Policy Action is configured to reverse the read-only behavior when the condition becomes false, the **Urgency** field will become editable again.

5. Test Scenario

Test Case	Condition	Expected Result
TC01	Impact = 1 – High	Urgency becomes read-only
TC02	Impact ≠ 1 – High	Urgency behavior is reversed according to the UI Policy configuration
TC03	Change Impact to High	Urgency becomes read-only
TC04	Change Impact from High to another value	Urgency becomes editable if reverse behavior is configured

Test Case	Condition	Expected Result
TC01	Impact = 1 – High	Urgency becomes read-only
TC02	Impact ≠ 1 – High	Urgency behavior is reversed according to the UI Policy configuration
TC03	Change Impact to High	Urgency becomes read-only
TC04	Change Impact from High to another value	Urgency becomes editable if reverse behavior is configured

6. Final Outcome

The **Urgency UI Policy Action** provides dynamic control over the Urgency field based on Incident Impact.

When an Incident is classified as **High Impact**, the Urgency field is protected from user modification, helping maintain consistent and controlled Incident data.
